

AMENDMENTS TO THE SPECIFICATION:

Page 8, lines 25-30, amend the paragraph as:

The login verification serving party such as CA can process ~~proceed~~ online authorization and authentication with the ICP and the user-login-identification means; authentication between the ICP and the user-login-identification means can be self accomplished offline—without the login verification serving party participating in, and according to the information stored in the user-login-identification means.

Page 12, lines 7-23, amend the paragraph as:

After the administration/drive module is installed, a corresponding Tray Icon will be added on the user's desktop; and the user can activate or close the administration/drive module. The user has to enter the password to activate the administration/drive module; the administration/drive module monitors the port of the user-login-identification means, when the user inserts the user-login-identification means of the administration/drive module, the user is asked to enter the password to activate the user-login-identification means of the administration/drive module. If the user cancels the operation or the entered password is not correct, the user-login-identification means of the administration/drive module will not be activated (in an inactive state). When the user pulls out the user-login-identification means of the administration/drive module, the user-login-identification means of the administration/drive module will be closed; ~~[[an]]~~ a function of modifying the PIN code is provided for the user as ~~well~~ well as the function for setting up the submit ~~mode, content~~ mode, content input and record mode of the administration/drive module

by the user, and the function for leading in and leading out the information stored in the user-login-identification means of the administration/drive module in the case of simple encryption.

Page 15, line 32 to page 17, line 24, amend the paragraph as:

Mr. Wang selects user-login on the sina home page. The relating code added in the member login web page by the sina tries to read Mr. Wang's user-login-identification means of the administration/drive module via the interface of the OCX (which introduces the parameters such as form number). The OCX accesses the user-login-identification means of the administration/drive module, and confirms that it is in the active state. The OCX obtains the sina's authentication file and transmits it to the administration/drive module. The administration/drive module looks up the relating information in Mr. Wang's user-login-identification means of the administration/drive module according to the authentication file and the form number, and if no required information is found, the OCX will ~~informs~~ inform the sina that the page code does not obtain the required information. Mr. Wang enters the login information in which the username is dingding and the password is ding2002, and then logs in. The relating code added in the member login web page by the sina tries to store the data in Mr. Wang's user-login-identification means of the administration/drive module via the interface of the OCX (which introduces the parameters such as form number, user information, etc.). The OCX accesses the user-login-identification means of the administration/drive module and confirms that it is in the active state. The OCX obtains the authentication file of the sina and transmits the file to the administration/drive module. The administration/drive module looks up the

relating information in Mr. Wang's user-login-identification means of the administration/drive module according to the authentication file and the form number, and the OCX stores the data in Mr. Wang's user-login-identification means of the administration/drive module in the case that no identical form number is found. Mr. Wang closes the sina and enters the home page of the sina again, and it is detected that the administration/drive module software and the OCX have already been downloaded, and the automatic download of the administration/drive module software and the OCX is not needed. Mr. Wang selects the user-login. The relating code added in the member login web page by the sina tries to read Mr. Wang's user-login-identification means of the administration/drive module via the interface of the OCX (which introduces the parameters such as form number, etc.). The OCX accesses the user-login-identification means of the administration/drive module and confirms that it is in the active state. The OCX obtains the authentication file of the sina and transmits the file to the administration/drive module. The administration/drive module looks up the relating information in Mr. Wang's user-login-identification means of the administration/drive module according to the authentication file and the form number, and the OCX transmits the information to the sina web page code in the case that the required information is found. The sina web page code obtains the information and then automatically logs in by using the username of dingding and the password of ding2002. Mr. Wang selects to log in once more and enters the login information in which the username is joy and the password is 991817, and then logs in. The relating code added in the member login web page by the sina tries to store the data in Mr. Wang's user-login-identification means of the administration/drive module via the interface of the OCX (which introduces the

parameters such as form number, user information, etc.). The OCX accesses the user-login-identification means of the administration/drive module and confirms that it is in the active state. The OCX obtains the authentication file of the sina and transmits the file to the administration/drive module. The administration/drive module looks up the relating information in Mr. Wang's user-login-identification means of the administration/drive module according to the authentication file and the form number, and the OCX stores the new data in Mr. Wang's user-login-identification means of the administration/drive module to overlap the old data in the case that the same form number is found. Mr. Wang clicks the Tray Icon of the "administration/drive module" and selects "close the administration/drive module", and then the Tray Icon is shown as in the inactive state.
